WIKA
Standard product portfolio

Pressure | Temperature | Level | Force | Flow | Calibration
About us

As a family-run business acting globally, with over 9,300 highly qualified employees, the WIKA group of companies is a worldwide leader in pressure and temperature measurement. The company also sets the standard in the measurement of level, force and flow, and in calibration technology.

Founded in 1946, WIKA is today a strong and reliable partner for all the requirements of industrial measurement technology, thanks to a broad portfolio of high-precision instruments and comprehensive services.

With manufacturing locations around the globe, WIKA ensures flexibility and the highest delivery performance. Every year, over 50 million quality products, both standard and customer-specific solutions, are delivered in batches of 1 to over 10,000 units.

With numerous wholly owned subsidiaries and partners, WIKA competently and reliably supports its customers worldwide. Our experienced engineers and sales experts are your competent and dependable contacts locally.

Bourdon tube pressure gauges

Copper alloy

These pressure gauges are suitable for liquid and gaseous media, so long as they are not highly viscous or crystallising and do not attack copper alloy parts. The scale ranges cover pressures from 0.6 … 1,000 bar. These instruments are manufactured in accordance with the European standard EN837-1 (except for model 116.15 and 111.12 in NS 27).

For the individual models, various approvals such as EAC, GL and KBA exist. For measuring points with high dynamic loads, such as fast load cycles or vibrations, a liquid-filled design should be used.

### 111.10, 111.12

Bourdon tube pressure gauges

Stainless steel

The application areas for these pressure gauges, manufactured entirely in stainless steel, are gaseous and liquid aggressive media that are not highly viscous or crystallising, also in aggressive environments. They are suitable for scale ranges from 0 … 0.6 to 0 … 7,000 bar.

Dependant upon the pressure range and the instrument model, overload safety of up to a maximum of 5 x full scale value is possible. To this point, the measurement accuracy is maintained. Liquid filling the case ensures a precise instrument display, even with high dynamic pressure loads and vibrations.

### 131.11
**Compact version**

- **Nominal size**: 40, 50, 63 mm
- **Scale range**: NS 40, 50: 0 … 1 to 0 … 600 bar.
- **Scale range**: NS 63: 0 … 1 to 0 … 1,000 bar
- **Accuracy class**: 2.5
- **Ingress protection**: IP65
- **Data sheet**: PM 01.05

### 232.50, 233.50
**For the process industry, standard version**

- **Nominal size**: 63, 100, 160 mm
- **Scale range**: NS 63: 0 … 1 to 0 … 1,000 bar
- **Scale range**: NS 100: 0 … 0.6 to 0 … 1,000 bar
- **Scale range**: NS 160: 0 … 0.6 to 0 … 1,600 bar
- **Accuracy class**: 1.0 (NS 100, 160), 1.6 (NS 63)
- **Ingress protection**: IP65
- **Data sheet**: PM 02.02

### 232.30, 233.30
**For the process industry, safety version**

- **Nominal size**: 63, 100, 160 mm
- **Scale range**: NS 63: 0 … 1 to 0 … 1,000 bar
- **Scale range**: NS 100: 0 … 0.6 to 0 … 1,000 bar
- **Scale range**: NS 160: 0 … 0.6 to 0 … 1,600 bar
- **Accuracy class**: 1.0 (NS 100, 160), 1.6 (NS 63)
- **Ingress protection**: IP65
- **Data sheet**: PM 02.04

### 232.36, 233.36
**High overload safety up to the 4-fold full scale value, safety version**

- **Nominal size**: 100, 160 mm
- **Scale range**: 0 … 0.6 to 0 … 40 bar
- **Overload safety**: Up to 4 times the measuring range
- **Accuracy class**: 1.0
- **Ingress protection**: IP65
- **Data sheet**: PM 02.15

### 232.34, 233.34
**Process Gauge, safety version per ASME B40.100**

- **Nominal size**: 4 ½”
- **Scale range**: 0 … 0.6 bar to 0 … 1,000 bar
- **Accuracy class**: Grade 2A
- **Ingress protection**: IP65 per EN 600529/IEC 529 (with liquid filling IP65)
- **Data sheet**: PM 02.10
Test gauges

For highest accuracy

Depending upon the instrument model, accuracies of 0.1, 0.25 or 0.6 % of full scale value can be measured.

The pressure ranges cover from 0 … 6 mbar to 0 … max. 1,600 bar and are suitable for calibration tasks. For each of the pressure gauges specified here, a DKD/DAkkS certificate can be provided.

Diaphragm pressure gauges

The application areas for diaphragm pressure gauges are very versatile. They are the specialists in the process industry when it comes to critical measuring tasks such as with highly corrosive or viscous media or when it comes to low pressures and high overload. The scale ranges are from as low as 0 … 16 mbar to typically 0 … 25 to 0 … 40 bar. Dependant upon the pressure range and the instrument model, overload safety of 3 x or 5 x full scale value is possible as standard.

For special designs, an overload safety of up to 400 bar is possible, with the measurement accuracy maintained. Diaphragm pressure gauges are even suitable for highly viscous or contaminated media by using an open connecting flange (per DIN/ASME). For measuring particularly aggressive media, the complete wetted surface can be lined with a large selection of special materials (e.g. PTFE, Hastelloy, tantalum, and many more).

422.12, 423.12
Grey cast iron case

432.50, 433.50
For the process industry, high overload safety up to the 10-fold full scale value, max. 40 bar

432.36, 432.56
For the process industry, high overload safety to 40, 100 or 400 bar

Capsule pressure gauges

For very low pressures

These measuring instruments are particularly suited to gaseous media. The scale ranges are between 0 … 2.5 mbar and 0 … 1,000 mbar in accuracy classes from 0.1 to 2.5. Capsule pressure gauges consist of two circular, corrugated diaphragms, joined together around the edge with a pressure-tight seal. Overload protection is possible in certain cases.

Differential pressure gauges

Differential pressure gauges work with a wide range of pressure elements. With this variety, measuring ranges from 0 … 0.5 mbar to 0 … 1,000 bar and static overlay pressures up to 400 bar are possible.

These measuring instruments monitor:
- the pollution degree in filter systems
- the level in closed tanks
- the overpressure in clean rooms
- the flow of gaseous and liquid media
- and they control pumping plants

Absolute pressure gauges

Absolute pressure gauges are used when measured pressures are independent of the natural fluctuations in atmospheric pressure. The pressure of the measured media is determined against a reference pressure, which corresponds to the absolute pressure zero point. For this, the reference chamber is completely evacuated, so that there is a near-perfect vacuum in it.

Applications for these high-precision measuring instruments are, for example, monitoring of vacuum pumps and vacuum packing machines. They are also used in laboratories, in order to monitor condensation pressures or to determine the vapour pressure of liquids.

### HP-2

**For highest pressure applications to 15,000 bar**

- **Accuracy** (± % of span) ≤ 0.25 or 0.5
- **Measuring range** 0 ... 1,600 to 0 ... 15,000 bar
- **Special feature**
  - Very high long-term stability
  - Excellent load cycle stability
  - Cavitation protection (optional)
- **Data sheet** PE 81.53

### M-10, M-11

**Spanner width 19**

- **Accuracy** (± % of span) ≤ 0.2 BFSL
- **Measuring range** 0 ... 6 to 0 ... 1,000 bar
- **Special feature**
  - Small spanner width 19 mm
  - Flush connection G ¼ available
- **Data sheet** PE 81.25

### P-30, P-31

**For precision measurements**

- **Accuracy** (± % of span) ≤ 0.1 or 0.05
- **Measuring range**
  - 0 ... 0.25 to 0 ... 1,000 bar
  - 0 ... 0.25 to 0 ... 25 bar abs.
  - -1 ... 0 to -1 ... +15 bar
- **Special feature**
  - No additional temperature error in the range 10 ... 60 °C
  - Flush process connection (optional)
  - Analogue, CANopen® or USB
- **Data sheet** PE 81.54

### MHC-1

**For mobile working machines, CANopen® or J1939**

- **Accuracy** (± % of span) ≤ 1 or 0.5
- **Measuring range** 0 ... 60 to 0 ... 1,000 bar
- **Special feature**
  - Tested for harsh environmental conditions
  - Robust instrument design
  - Version with integrated Y-connector
- **Data sheet** PE 81.49

Further information at www.wika.com
### OEM pressure sensors

**O-10**
- **For industrial applications**
- **Accuracy** \( (\pm \text{\% of span}) \leq 0.5 \text{ BFSL} \)
- **Measuring range**
  - 0 … 6 to 0 … 600 bar
  - -1 … +5 to -1 … +59 bar
- **Special feature**
  - For OEM quantities
  - Customer-specific variants
  - Special version for applications with water as medium
- **Data sheet** PE 81.65

**MH-3**
- **For mobile working machines**
- **Accuracy** \( (\pm \text{\% of span}) \leq 1 \)
- **Measuring range**
  - 0 … 6 to 0 … 600 bar
- **Special feature**
  - For extreme operating conditions
  - Compact and robust design
  - Diagnostic function (optional)
  - Signal clamping (optional)
  - Customer-specific adaptations possible
- **Data sheet** PE 81.59

**R-1**
- **For refrigeration and air-conditioning applications**
- **Accuracy** \( (\pm \text{\% of span}) \leq 2 \)
- **Measuring range**
  - 0 … 6 to 0 … 160 bar
  - -1 … +7 to -1 … +45 bar
- **Special feature**
  - Special case design for the best possible condensation tightness
  - Resistant to all common refrigerants
- **Data sheet** PE 81.45

**C-2**
- **For air compressors**
- **Accuracy** \( (\pm \text{\% of span}) \leq 0.5 \text{ BFSL} \)
- **Measuring range**
  - 0 … 6 to 0 … 600 bar
  - -1 … +10 to -1 … +45 bar
- **Special feature**
  - Robust design
  - Compact design
  - Long service life and high reliability
- **Data sheet** PE 81.47

**MG-1**
- **For medical gases**
- **Accuracy** \( (\pm \text{\% of span}) \leq 2 \)
- **Measuring range**
  - 0 … 6 to 0 … 400 bar
  - -1 … +6 bar
- **Special feature**
  - Cleaned, packed and labelled for oxygen per international standards
- **Data sheet** PE 81.44
# Customer-specific electronic pressure measurement solutions

We see ourselves not only as a provider of top quality measurement technology, but also as a highly competent partner that is able to create individually designed solutions together with you. We are ready to develop products for you that are tailor made to cater for your individual needs. Create your perfect pressure sensor solution together with us. Here, the experience from a multitude of completed projects is incorporated - thus we can refer back to numerous proven solutions and components. As required, we will adapt our systems to your individual application or develop new ones.

Talk to us – we are happy to provide you with advice!

The multi-functional intelliGAUGEs present a cost-effective and, at the same time, reliable solution for nearly all pressure measurement applications. They combine the analogue indication of a mechanical pressure gauge, needing no external power, with the electrical output signal of a pressure sensor. These hybrid instruments are available with all commonly used electrical signals. The sensor works in a non-contact way, without any influence on the measuring signal. Many of the instruments can be delivered in accordance with ATEX Ex ia.

Depending on the pressure gauge, the following electrical output signals are possible:

- 0.5 ... 4.5 V (ratiometric)
- 4 ... 20 mA, 2-wire
- 4 ... 20 mA, 2-wire with Ex approvals
- 0 ... 20 mA, 3-wire
- 0 ... 10 V, 3-wire

For pressure gauges with nominal sizes 100 and 160 mm, the electrical output signals can also be combined with switch contacts.

</table>
Control systems are gaining more and more importance in industrial applications. Consequently, mere pressure indication on the measuring instrument itself is no longer sufficient, rather the measured value must be transferred to the control system via an electrical signal, e.g. by closing or opening of a circuit. WIKA is focusing on its contact pressure gauges in order to satisfy this trend.

All instruments with inductive contacts are certified in accordance with ATEX Ex ia.

### PGS21
- **Bourdon tube, stainless steel case**
- Nominal size: 40, 50, 63 mm
- Scale range: 0 ... 2.5 to 0 ... 400 bar
- Accuracy class: 2.5
- Ingress protection: IP65
- Special feature: NS 50 Version with VdS or LPCB approval possible
- Data sheet: PV 21.02

### PGS25
- **Bourdon tube, with electronic pressure switch, stainless steel case**
- Nominal size: 50, 63 mm
- Scale range: 0 ... 1.6 to 0 ... 400 bar
- Accuracy class: 2.5
- Ingress protection: IP65
- Data sheet: PV 21.04

### PGS21.100, PGS21.160
- **Bourdon tube, stainless steel case**
- Nominal size: 100, 160 mm
- Scale range: 0 ... 0.6 to 0 ... 600 bar
- Accuracy class: 1.0
- Ingress protection: IP54
- Data sheet: PV 22.01

### PGS23.100, PGS23.160
- **Bourdon tube, for the process industry, standard or safety version**
- Nominal size: 100, 160 mm
- Scale range: 0 ... 0.6 to 0 ... 1,600 bar
- Accuracy class: 1.0
- Ingress protection: IP65 or IP66
- Data sheet: PV 22.02

### PGS23.063
- **Bourdon tube, for the process industry, safety version**
- Nominal size: 63 mm
- Scale range: 0 ... 4 to 0 ... 400 bar
- Accuracy class: 1.6
- Ingress protection: IP54
- Data sheet: PV 22.03

### PGS43.100, PGS43.160
- **Diaphragm element, for the process industry, high overload safety up to the 10-fold full scale value, max. 40 bar**
- Nominal size: 100, 160 mm
- Scale range: 0 ... 25 mbar to 0 ... 25 bar
- Accuracy class: 1.6
- Ingress protection: IP54, with liquid filling IP65
- Data sheet: PV 24.03

Depending on the model the following contacts are built-in:
- Magnetic snap-action contact, e.g. model 821, for general applications
- Inductive contact model 831, for hazardous areas
- Electronic contact model 830 E, for PLC
- Reed contact model 851, for general applications and PLC
- Micro switch model 850
- Transistor output NPN or PNP
432.36, 432.56 with 8xx
Diaphragm element, for the process industry, high overload safety to 100 or 400 bar

Nominal size 100, 160 mm
Scale range 0 ... 25 mbar to 0 ... 40 bar
Accuracy class 1.6
Ingress protection IP54, with liquid filling IP65
Data sheet PV 24.07

532.53 with 8xx
Absolute pressure, for the process industry, high overload safety

Nominal size 100, 160 mm
Scale range 0 ... 25 mbar to 0 ... 25 bar abs.
Accuracy class 1.6
Ingress protection IP54, with liquid filling IP65
Data sheet PV 25.02

632.51 with 8xx
Capsule element, for the process industry, high overload safety

Nominal size 100, 160 mm
Scale range 0 ... 2.5 to 0 ... 100 mbar
Accuracy class 1.6
Ingress protection IP54
Data sheet PV 26.06

DPGS40
Differential pressure, with micro switches, with integrated working pressure indication (DELTA-comb)

Nominal size 100 mm
Scale range 0 ... 0.25 to 0 ... 10 bar
Accuracy class 2.5 (optional 1.6)
Ingress protection IP65
Data sheet PV 27.20

DPGS43
Differential pressure, for the process industry, all-metal media chamber

Nominal size 100, 160 mm
Scale range 0 ... 16 mbar to 0 ... 25 bar
Accuracy class 1.6
Ingress protection IP54, filled IP65
Data sheet PV 27.55

DPGS43HP
Differential pressure, for the process industry, high overload safety to 400 bar

Nominal size 100, 160 mm
Scale range 0 ... 60 mbar to 0 ... 40 bar
Accuracy class 1.6
Ingress protection IP54, filled IP65
Data sheet PV 27.13

- Easily readable, robust display
- Intuitive and fast setup
- Easy and flexible mounting configurations
- Flexibly configurable and scalable output signals
Data sheet PE 81.86

Mechanical pressure switches for industrial applications

PSM01
OEM compact pressure switch, standard version

Setting range
-0.85 ... -0.15 bar
0.2 ... 2 bar to 40 ... 400 bar
Switching function Change-over contact (SPDT)
Material Galvanised steel, stainless steel
Switching power 1A/4A, AC 48 V
0.5A/2A, DC 24 V
Data sheet PV 34.81

PSM02
OEM compact pressure switch, with settable hysteresis

Setting range
-0.85 ... -0.15 bar
0.2 ... 2 bar to 40 ... 400 bar
Switching function Change-over contact (SPDT)
Material Galvanised steel, stainless steel
Switching power 1A/4A, AC 250 V
0.5A/2A, DC 24 V
Data sheet PV 34.82

PSM-520
Pressure switch, heavy-duty version, adjustable switch differential

Setting range
-0.4 ... +7 bar
0 ... 5 bar to 6 ... 30 bar
Switching function Change-over contact (SPDT)
Material
- Bellow: Copper alloy CuSn6 per EN 1652
- Free cutting steel EN1A per EN 10277-3, tin-plated
Switching power 10A/6A, AC 230 V
Data sheet PV 35.01
Mechanical pressure switches for the process industry

Due to the use of high-quality micro switches, the mechanical pressure switches are notable for their high precision and long-term stability. Furthermore, the direct switching of electrical loads up to AC 250 V/20 A is enabled, while simultaneously ensuring a high switch point reproducibility.

The instruments come with a SIL certificate and are thus particularly suited for safety-critical applications. In addition, with their ‘intrinsically safe’ and ‘flameproof enclosure’ ignition protection types the pressure switches are ideally suited for permanent use in hazardous environments.

All mechanical pressure switches for the process industry are available with EAC certificate and technical passport.

### PXS, PXA
**Mini pressure switch**

- **Setting range**: 1 … 2.5 to 200 … 1,000 bar
- **Ignition protection type**: Ex ia or Ex d
- **Switch**: 1 or 2 x SPDT or DPDT
- **Switching power**: AC 250 V/5 A, DC 24 V/5 A
- **Data sheet**: PV 34.36, PV 34.38

### PCS, PCA
**Compact pressure switch**

- **Setting range**: -1 … -0.2 to 200 … 1,000 bar
- **Ignition protection type**: Ex ia or Ex d
- **Switch**: 1 or 2 x SPDT or DPDT
- **Switching power**: AC 250 V/15 A, DC 24 V/2 A
- **Data sheet**: PV 33.30, PV 33.31

### MW, MA
**Diaphragm pressure switch**

- **Setting range**: 0 … 16 mbar to 30 … 600 bar
- **Ignition protection type**: Ex ia or Ex d
- **Switch**: 1 or 2 x SPDT or 1 x DPDT
- **Switching power**: AC 250 V/20 A, DC 24 V/2 A
- **Data sheet**: PV 31.10, PV 31.11

### BWX, BA
**Bourdon tube pressure switch**

- **Setting range**: 0 … 2.5 to 0 … 1,000 bar
- **Ignition protection type**: Ex ia or Ex d
- **Switch**: 1 or 2 x SPDT or 1 x DPDT
- **Switching power**: AC 250 V/20 A, DC 24 V/2 A
- **Data sheet**: PV 32.20, PV 32.22

### DW, DA
**Differential pressure switch**

- **Setting range**: 0.3 … 2.5 mbar to 0 … 40 bar, static pressure to 160 bar
- **Ignition protection type**: Ex ia or Ex d
- **Switch**: 1 or 2 x SPDT or 1 x DPDT
- **Switching power**: AC 250 V/20 A, DC 24 V/2 A
- **Data sheet**: PV 35.42, PV 35.43, PV 35.50

### APW, APA
**Absolute pressure switch**

- **Setting range**: 0 … 25 mbar to 0 … 1.5 bar abs.
- **Proof pressure**: 11 bar abs.
- **Ignition protection type**: Ex ia or Ex d
- **Switch**: 1 or 2 x SPDT or 1 x DPDT
- **Switching power**: AC 250 V/20 A, DC 24 V/2 A
- **Data sheet**: PV 35.49, PV 35.48

Diaphragm seal systems

These combinations of diaphragm seals and pressure gauges or pressure sensors feature fast availability. They are particularly suitable for demanding measuring tasks in the pharmaceutical and biotechnology industries, food and beverage industries, and through to the oil & gas, chemical, petrochemical and semiconductor industries.

The diaphragm seal systems can be used for processes with gases, compressed air or vapour, with liquid, paste-like, powdery and crystallising media and also with aggressive, adhesive, corrosive, highly viscous, environmentally hazardous or toxic media.

The diaphragm seal is directly welded to the pressure gauge or pressure sensor. The diaphragm made of stainless steel provides for the separation from the medium. The pressure is transmitted to the measuring instrument via the system fill fluid which is inside the diaphragm seal system.

With flange connection

Diaphragm seals – combinations and accessories

WIKA diaphragm seals can be connected to almost all pressure gauges, process transmitters, pressure switches or pressure sensors. Mounting may be made via a direct connection, a cooling element or a corresponding capillary. The combined systems can therefore withstand a pressure of 10 mbar up to 3,600 bar at extreme temperatures (-130 … +400 °C) and with a wide variety of media, thus enabling pressure measurements under extreme conditions. The optimal diaphragm seal designs, materials, system fill fluids and accessories are available for each application. The diaphragm seals can be supplied with test certificates and approvals for special applications.

Accessories

- Block and saddle flanges
- Valves
- Flushing rings
- Plug screws
- Clamp connections
- Instrument mounting brackets and adapters
- Union nuts
- Transition pieces
- Connection adapters, e.g. VARIVENT®, clamp, aseptic, welding sleeves, weld stubs

Extensive information can be found in our brochure “Diaphragm seals – combinations and accessories” at www.wika.de.

## Protective devices

### 910.12, 910.13

**Snubbers and overpressure protectors**

- **Application**: For the protection of pressure measuring instruments from pressure surges and pulsations or overpressures
- **Version**: 910.13: Version with LH-RH union or fixed bushing
- **Material**: Brass, steel, stainless steel
- **Nominal pressure**: 910.12: to 400 bar, 910.13: To 600 bar (overload safety to 1,000 bar)
- **Data sheet**: AC 09.03, AC 09.04

### 910.15

**Syphons**

- **Application**: For the protection of pressure measuring instruments from excessive pulsation and heat
- **Version**: U-form, trumpet form, compact form, standard
- **Material**: Steel, stainless steel
- **Nominal pressure**: To 160 bar
- **Data sheet**: AC 09.06

### 910.14, 910.16, 910.17

**Adapters, instrument mounting brackets and sealings**

- **Application**: For mounting and sealing pressure gauges
- **Data sheet**: AC 09.05, AC 09.07, AC 09.08

Further information at www.wika.com
Our dial thermometers work on the bimetal, expansion or gas actuation principle. This enables scale ranges of -200 … +700 °C in different class accuracies, response times and resilience to environmental influences. Diverse connection designs, stem diameters and individual stem lengths enable a flexible measuring point design.

Dial thermometers with capillaries are particularly versatile. All thermometers are suited for operation in a thermowell if necessary.

**Bimetal thermometers**

**A43**

**Heating technology**

Nominal size 63, 80, 100 mm  
Scale range -30 … +120 °C  
Permissible operating pressure at thermowell/stem Max. 6 bar  
Wetted parts Copper alloy  
Data sheet TM 43.01

**A48**

**Refrigeration and air-conditioning technology**

Nominal size 63, 80, 100, 160 mm  
Scale range -30 … +120 °C  
Permissible operating pressure at thermowell/stem Max. 6 bar  
Wetted parts Copper alloy  
Data sheet TM 48.01

**A51**

**Heating technology, high-quality version**

Nominal size 63, 80, 100 mm  
Scale range -30 … +250 °C  
Permissible operating pressure at thermowell/stem Max. 6 bar  
Wetted parts Copper alloy  
Data sheet TM 51.01

## Dial thermometers

### Gas-actuated thermometers

#### R73, S73, A73
**Axial and radial, adjustable stem and dial**

- **Nominal size**: 100, 160 mm
- **Scale range**: -200 ... +100 to 0 ... +700 °C
- **Wetted parts**: Stainless steel
- **Option**: 
  - Liquid damping (case)
  - Contact bulb
- **Data sheet**: TM 73.01

#### F73
**With capillary**

- **Nominal size**: 100, 160 mm
- **Scale range**: -200 ... +100 to 0 ... +700 °C
- **Wetted parts**: Stainless steel
- **Option**: 
  - Armoured or coated capillary (PVC coating)
  - Liquid damping (case)
  - Contact bulb
- **Data sheet**: TM 73.01

#### 75
**Highly vibration resistant**

- **Nominal size**: 100 mm
- **Scale range**: 0 ... +700 or -50 ... +650 °C
- **Wetted parts**: Stainless steel
- **Option**: Various neck-tube and insertion lengths
- **Data sheet**: TM 75.01

### Thermomanometers

#### MFT
**With capillaries, for pressure and temperature measurement**

- **Nominal size**: 40, 42, 52 mm
- **Scale range**: 
  - Pressure 0 ... 4 bar
  - Temperature 0 ... 120 °C
- **Accuracy class**: 
  - Pressure 2.5 (EN 837-1)
  - Temperature 2.5
- **Connection location**: Lower mount or back mount
- **Data sheet**: PM 01.20

#### THM10
**Eco version, for pressure and temperature measurement**

- **Nominal size**: 63, 80 mm
- **Scale range**: 
  - Pressure 0 ... 4 to 0 ... 10 bar
  - Temperature 2 (EN 13190)
- **Connection location**: Lower mount or back mount
- **Accuracy class**: 
  - Pressure 2.5 (EN 837-1)
  - Temperature 2.5 °C
- **Data sheet**: PM 01.24

#### 100.02
**For pressure and temperature measurement**

- **Nominal size**: 63, 80 mm
- **Scale range**: 
  - Pressure 0 ... 1 to 0 ... 16 bar
  - Temperature 0 ... 100 to 0 ... 150 °C
- **Accuracy class**: 
  - Pressure 2.5 (EN 837-1)
  - Temperature 2.5 °C
- **Data sheet**: PM 01.23

Further information at www.wika.com
Thermocouples generate a voltage directly dependent on temperature. They are particularly suitable for high temperatures to 1,700 °C (3,092 °F) and for very high oscillating stresses. For thermocouples, the accuracy classes 1 and 2 apply (ASTM: Standard and special). They are available with a tolerance value in accordance with IEC 60584-1/ASTM E230.

In our range of products you will find all market-standard instrument versions. If required, a temperature transmitter can be installed in the connection head.
**TC10-K**

Measuring insert, for installation in TC10-L

- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +1,200 °F
- **Measuring point**: Ungrounded or grounded
- **Data sheet**: TE 65.11

---

**TC10-L**

Flameproof enclosure, for additional thermowell

- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +2,192 °F
- **Measuring point**: Ungrounded or grounded
- **Data sheet**: TE 65.12

---

**TC12-A**

Measuring insert for process thermocouple

- **Sensor element**: Types K, J, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +1,200 °F
- **Measuring point**: Ungrounded or grounded
- **Data sheet**: TE 65.16

---

**TC12-B**

Process thermocouple, for additional thermowell

- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +2,192 °F
- **Measuring point**: Ungrounded or grounded
- **Option**: Ex i, Ex d
- **Data sheet**: TE 65.17

---

**TC12-M**

Process thermocouple, basic module

- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +2,192 °F
- **Measuring point**: Ungrounded or grounded
- **Option**: Ex i, Ex d
- **Data sheet**: TE 65.17

---

Thermocouples

TC40
Cable thermocouple

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 ... +1,200 °C, -40 ... +2,192 °F
- Measuring point: Ungrounded or grounded
- Cable: PVC, silicone, PTFE, fibreglass
- Data sheet: TE 65.40

TC46
Hot runner thermocouple

- Sensor element: Types J or K
- Measuring range: -25 ... +400 °C, -13 ... +752 °F
- Measuring point: Ungrounded or grounded
- Feature: Probe diameter 0.5 ... 3.0 mm, Plastic-moulded transition
- Data sheet: TE 66.46

TC47
Plastics machinery thermocouple

- Sensor element: Types J or K
- Measuring range: -25 ... +400 °C
- Measuring point: Ungrounded or grounded
- Feature: Various process connections, Connection lead fibreglass with stainless steel braid
- Data sheet: TE 67.20

TC50
Surface thermocouple

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 ... +1,200 °C, -40 ... +2,192 °F
- Measuring point: Ungrounded or grounded
- Process connection: Surface mounting
- Data sheet: TE 65.50

TC53
Bayonet thermocouple

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 ... +1,200 °C, -40 ... +2,192 °F
- Measuring point: Ungrounded or grounded
- Feature: Single and dual thermocouple, Explosion-protected versions
- Data sheet: TE 65.53

TC59
Tubeskin thermocouple

- Sensor element: Type K or N
- Measuring range: 0 ... 1,200 °C, 32 ... 2,192 °F
- Measuring point: Welded or exchangeable
- Process connection: Surface mounting
- Data sheet: TE 65.56 ... TE 65.59
**Temperature | Transmit + Record**

**TC80**
High-temperature thermocouple

- **Sensor element**: Types S, R, B, K, N or J
- **Measuring range**: 0 … 1,700 °C, 32 … 3,092 °F
- **Measuring point**: Ungrounded
- **Process connection**: Stop flange, threaded bushing
- **Data sheet**: TE 65.80

**TC81**
For flue gas temperature measurements

- **Sensor element**: Types K, N or J
- **Measuring range**: 0 … 1,200 °C, 32 … 2,192 °F
- **Measuring point**: Ungrounded or grounded
- **Process connection**: Stop flange, threaded bushing
- **Data sheet**: TE 65.81

**TC84**
Sapphire-design thermocouple

- **Sensor element**: Types S, R, B
- **Thermowell**: Sapphire (monocrystalline)
- **Case**: Highest safety thanks to 2-chamber system
- **Process connection**: Various high-pressure connections
- **Data sheet**: TE 65.84

**TC90**
High-pressure thermocouple

- **Sensor element**: Types K, J, or E
- **Measuring range**: 0 … 350 °C, 32 … 662 °F
- **Tip**: Ungrounded or grounded
- **Process connection**: Various high-pressure connections
- **Data sheet**: TE 65.90

**TC95**
Multipoint thermocouple in band design

- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: 0 … 1,200 °C, 32 … 2,192 °F
- **Tip**: Ungrounded or grounded
- **Process connection**: Various process connections
- **Data sheet**: TE 70.01

**TC96-R**
Flexible multipoint thermometer

- **Sensor element**: Types K, J, E, or N
- **Measuring range**: 0 … 1,200 °C, 32 … 2,192 °F
- **Tip**: Ungrounded or grounded
- **Process connection**: Various process connections
- **Data sheet**: TE 70.10

Resistance thermometers

Resistance thermometers are equipped with platinum sensor elements which change their electrical resistance as a function of temperature. In our range of products you will find resistance thermometers with connected cable as well as versions with connection head. A temperature transmitter can be installed directly in the connection head.

Resistance thermometers are suitable for applications between -196 ... +600 °C (dependent on instrument model, sensor element, accuracy class and materials coming into contact with the medium).

Resistance thermometers are available in classes AA, A and B in accordance with IEC 60751.

TR10-A
Measuring insert, MI cable

TR10-B
For additional thermowell

TR10-C
Threaded, with fabricated thermowell

TR10-D
Threaded, miniature design

TR10-F
Flanged resistance thermometer, with fabricated thermowell

TR10-H
Without thermowell
**TR10-J**
Threaded, with perforated thermowell

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -196 ... +600 °C, -320 ... +1,112 °F
- **Connection method**: 2-, 3- and 4-wire
- **Process connection**: Mounting thread
- **Data sheet**: TE 60.10

---

**TR11-A**
Measuring insert, tubular design

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -50 ... +250 °C, -58 ... +482 °F
- **Connection method**: 2-, 3- and 4-wire
- **Measuring insert**: Tubular design
- **Data sheet**: TE 60.13

---

**TR10-K**
Measuring insert, for installation in TR10-L

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -196 ... +600 °C, -320 ... +1,112 °F
- **Connection method**: 2-, 3- and 4-wire
- **Measuring insert**: MI cable
- **Data sheet**: TE 60.11

---

**TR10-L**
Flameproof enclosure, for additional thermowell

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -196 ... +600 °C, -320 ... +1,112 °F
- **Connection method**: 2-, 3- and 4-wire
- **Data sheet**: TE 60.12

---

**TR12-A**
Measuring insert for process resistance thermometer TR12-B

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -196 ... +600 °C, -320 ... +1,112 °F
- **Connection method**: 2-, 3- and 4-wire
- **Data sheet**: TE 60.16

---

**TR12-B**
Process resistance thermometer, for additional thermowell

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -196 ... +600 °C, -320 ... +1,112 °F
- **Connection method**: 2-, 3- and 4-wire
- **Option**: Ex i, Ex d
- **Data sheet**: TE 60.17

---

**TR12-M**
Process resistance thermometer, basic module

- **Sensor element**: 1 x Pt100, 2 x Pt100
- **Measuring range**: -196 ... +600 °C, -320 ... +1,112 °F
- **Connection method**: 2-, 3- and 4-wire
- **Option**: Ex i, Ex d
- **Data sheet**: TE 60.17

---

Resistance thermometers

**TR30**
Compact version

- Sensor element: 1 x Pt100
- Measuring range: -50 ... +250 °C, -58 ... +482 °F
- Output: Pt100, 4 ... 20 mA
- Data sheet: TE 60.30

**TR31**
OEM miniature design

- Sensor element: 1 x Pt100, 1 x Pt1000
- Measuring range: -50 ... +250 °C, -58 ... +482 °F
- Output: Pt100, Pt1000, 4 ... 20 mA
- CSA: Ordinary and hazardous locations
- Data sheet: TE 60.31

**TR33**
Miniature design, standard version

- Sensor element: 1 x Pt100, 1 x Pt1000
- Measuring range: -50 ... +250 °C, -58 ... +482 °F
- Output: Pt100, Pt1000, 4 ... 20 mA
- CSA: Ordinary locations
- Data sheet: TE 60.33

**TR34**
Miniature design, explosion-protected

- Sensor element: 1 x Pt100, 1 x Pt1000
- Measuring range: -50 ... +250 °C, -58 ... +482 °F
- Output: Pt100, Pt1000, 4 ... 20 mA
- CSA: Hazardous locations
- Data sheet: TE 60.34

**TR40**
Cable resistance thermometer

- Sensor element: 1 x Pt100, 2 x Pt100
- Measuring range: -196 ... +600 °C, -320 ... +1,112 °F
- Connection method: 2-, 3- and 4-wire
- Cable: PVC, silicone, PTFE
- Process connection: Surface mounting
- Data sheet: TE 60.40

**TR50**
Surface resistance thermometer

- Sensor element: 1 x Pt100, 2 x Pt100
- Measuring range: -196 ... +600 °C, -320 ... +1,112 °F
- Connection method: 2-, 3- and 4-wire
- Data sheet: TE 60.50
TR53
Bayonet resistance thermometer

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -196 … +400 °C, -320 … +752 °F
Connection method 2-, 3- and 4-wire
Process connection Bayonet
Data sheet TE 60.53

TR55
With spring-loaded tip

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -196 … +500 °C, -320 … +932 °F
Connection method 2-, 3- and 4-wire
Process connection Compression fitting
Data sheet TE 60.55

TR57-M
Pipe surface resistance thermometer, for clamping

Sensor element 1 x Pt100
Measuring range -20 … +150 °C, -4 … +302 °F
Connection method Pt100 3-wire, 4 … 20 mA
Data sheet TE 60.57

TR60
Indoor and outdoor resistance thermometer

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -40 … +80 °C, -40 … +176 °F
Connection method 2-, 3- and 4-wire
Process connection Wall mounting
Data sheet TE 60.60

TR75
DiwiTherm® with digital indicator

Measuring range -40.0 … +199.9 °C, +200 … +450 °C
with automatic measuring range changeover (autorange)
Power supply Battery operation
Data sheet TE 60.75

TR81
For flue gas temperature measurements

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -196 … +600 °C, -320 … +1,112 °F
Connection method 2-, 3- and 4-wire
Thermowell Metal
Data sheet TE 60.81

TR95
Multipoint resistance thermometer in band design

Sensor Pt100
Measuring range -196 … +600 °C, -320 … +1,112 °F
Connection method 2-, 3- and 4-wire
Process connection Various process connections
Data sheet TE 70.01

Temperature transmitters

**T15**
Digital temperature transmitter for resistance sensors

- **Input**: Resistance thermometers, potentiometers
- **Accuracy**: < 0.1 %
- **Output**: 4 ... 20 mA
- **Special feature**: The fastest and simplest configuration on the market
- **Data sheet**: TE 15.01

**T16**
Digital temperature transmitter for thermocouples

- **Input**: All commercially available thermocouples
- **Accuracy**: Typical < 2 K
- **Output**: 4 ... 20 mA
- **Special feature**: The fastest and simplest configuration on the market
- **Data sheet**: TE 16.01

**T32**
HART® temperature transmitter

- **Input**: Resistance thermometers, thermocouples, potentiometers
- **Accuracy**: < 0.1 %
- **Output**: 4 ... 20 mA, HART® protocol
- **Special feature**: TÜV certified SIL version (full assessment)
- **Data sheet**: TE 32.04

**T53**
FOUNDATION™ Fieldbus and PROFIBUS® PA transmitter

- **Input**: Resistance thermometers, thermocouples, potentiometers
- **Accuracy**: < 0.1 %
- **Output**: 4 ... 20 mA, HART® protocol
- **Special feature**: PC configurable
- **Data sheet**: TE 53.01

**T91**
Analogue temperature transmitter 3-wire, 0 ... 10 V

- **Input**: Resistance thermometers, thermocouples
- **Accuracy**: < 0.5 or < 1 %
- **Output**: 0 ... 10 V, 0 ... 5 V
- **Special feature**: Fixed measuring range
- **Data sheet**: TE 91.01, TE 91.02

**TIF50, TIF52**
HART® field temperature transmitter

- **Input**: Resistance thermometers, thermocouples
- **Accuracy**: < 0.1 %
- **Output**: 4 ... 20 mA, HART® protocol
- **Special feature**: PC configurable
- **Data sheet**: TE 62.01

**TFT35**
Compact temperature transmitter

- **Measuring range**: -50 ... +200 °C
- **Special feature**:
  - Output signal 4 ... 20 mA, 0 ... 10 V, 0.5 ... 4.5 V
  - Factory configured
  - Measuring insert exchangeable
  - Electric: connection via plug connection
- **Data sheet**: TE 76.18

# Temperature switches

## Temperature switches for industrial applications

### TSD-30

**Electronic temperature switch with display**

- **Measuring range**: -20 ... +80 °C, -20 ... +120 °C, 0 ... 150 °C
- **Output**:
  - Switching outputs PNP or NPN
  - 4 ... 20 mA
  - 0 ... 10 V
  - IO-Link 1.1
- **Data sheet**: TE 67.16

### TFS35

**Bimetal temperature switch**

- **Measuring range**: 50 ... 200 °C, fixed
- **Output**:
  - Switching voltage to AC 48 V, DC 24 V
  - Compact version: Normally closed (NC), normally open (NO)
  - Electr. connection via plug connection
- **Data sheet**: TV 35.01

### TFS135

**Bimetal temperature switch for voltages to AC 250 V**

- **Measuring range**: 50 ... 130 °C, fixed
- **Output**:
  - Switching voltages up to AC 250 V
  - Contact version normally closed (NC)
  - Electr. connection via plug connection
- **Data sheet**: TV 35.02

## Temperature switches for the process industry

### TXS, TXA

**Mini temperature switches**

- **Setting range**: -15 ... +20 to 180 ... 250 °C
- **Ignition protection type**: Ex ia or Ex d
- **Switching power**:
  - AC 220 V/5 A
  - DC 24 V/5 A
- **Data sheet**: TV 31.70, TV 31.72 (Ex)

### TCS, TCA

**Compact temperature switches**

- **Setting range**: -30 ... +10 to 160 ... 250 °C
- **Ignition protection type**: Ex ia or Ex d
- **Switching power**:
  - AC 250 V/15 A
  - DC 24 V/2 A
- **Data sheet**: TV 31.64, TV 31.65 (Ex)

### TWG, TAG

**Heavy-duty version**

- **Setting range**: -30 ... +70 to 0 ... 600 °C
- **Ignition protection type**: Ex ia or Ex d
- **Switching power**:
  - 1 or 2 SPDT or 1x DPDT
  - AC 250 V/20 A
  - DC 24 V/2 A
- **Data sheet**: TV 31.60, TV 31.61

## Temperature controllers

### CS4M
- **For panel mounting, 48 x 24 mm**
- **Input**: Multi-function input for resistance thermometers, thermocouples and standard signals
- **Control mode**: PID, PI, PD, P, ON/OFF (configurable)
- **Monitoring output**: Relay or logic level DC 0/12 V for 3-point control to control an electronic switch relay (SSR) or analogue current signal 4 ... 20 mA
- **Power supply**:
  - AC 100 ... 240 V
  - AC/DC 24 V
- **Data sheet**: AC 85.06

### CS4R
- **For rail mounting, 22.5 x 75 mm**
- **Input**: Multi-function input for resistance thermometers, thermocouples and standard signals
- **Control mode**: PID, PI, PD, P, ON/OFF (configurable)
- **Monitoring output**: Relay or logic level DC 0/12 V to control an electronic switch relay (SSR) or analogue current signal 4 ... 20 mA
- **Power supply**:
  - AC 100 ... 240 V
  - AC/DC 24 V
- **Data sheet**: AC 85.05

### CS6S, CS6H, CS6L
- **For panel mounting, 48 x 48, 48 x 96, 96 x 96 mm**
- **Input**: Multi-function input for resistance thermometers, thermocouples and standard signals
- **Control mode**: PID, PI, PD, P, ON/OFF (configurable)
- **Monitoring output**: Relay (AC 250 V, 3 A, (R) or 1 A (L)) or logic level DC 0/12 V for 3-point control to control an electronic switch relay (SSR) or analogue current signal 4 ... 20 mA
- **Power supply**:
  - AC 100 ... 240 V
  - AC/DC 24 V
- **Data sheet**: AC 85.08

### SC58
- **For panel mounting, 62 x 28 mm**
- **Input**: Pt100 or PTC
- **Control mode**: Simple 2-point controller
- **Monitoring output**: Relay switching output 12 A, 250 V
- **Power supply**:
  - AC 230 V
  - AC 12 ... 24 V or DC 16 ... 32 V
- **Data sheet**: AC 85.24

### SC64
- **For panel mounting, 64 mm, round**
- **Input**: Pt100 or PTC
- **Control mode**: Simple 2-point controller
- **Monitoring output**: Relay switching output 16 A, 250 V
- **Power supply**:
  - AC 230 V
  - AC 12 ... 24 V or DC 16 ... 32 V
- **Data sheet**: AC 85.25
Thermowells

Whether in aggressive or abrasive process media, whether in high- or low-temperature ranges: For electrical or mechanical thermometers, to prevent direct exposure of their temperature probes to the medium, thermowells that suit each application are available. Thermowells can be machined from solid-body material or assembled from tube sections and can either be screw-, weld- or flange-fitted.

They are offered in standard and special materials such as stainless steel 1.4571, 316L, Hastelloy® or titanium. Each version, depending on its construction type and its mounting to the process, has certain advantages and drawbacks with respect to its load limits and the special materials that can be used.

In order to manufacture thermowells for flange mounting at low cost from special materials, the designs used differ from standard thermowells in accordance with DIN 43772. Thus, only the wetted parts of the thermowell are manufactured from special materials, whereas the non-wetted flange is made of stainless steel and is welded to the special material.

This design is used both for fabricated and solid-machined thermowells. With tantalum as special material a removable jacket is used, which is slid over the supporting thermowell from stainless steel.

## Accessories

### PU-548
Programming unit for temperature transmitters

- LED status display
- Compact design
- No further voltage supply needed, neither for the programming unit nor for the transmitter
- Due to the magWIK quick connector, fast connection to the transmitter possible
- Data sheet AC 80.18

### magWIK
Magnetic quick connector

- For accelerated connection for all configuration and calibration processes
- Connection of 2-mm plug contacts or 4-mm plug contacts with adapter
- Data sheet AC 80.15

### 905
Contact protection relay for model 821 switch contacts

- Application: For optimal contact protection and highest switching reliability
- Data sheet: AC 08.01

### 904
Control unit for inductive contacts

- Application: For operating measuring instruments with inductive contacts
- Data sheet: AC 08.01

### Coupler connector

### Fittings

### Wires & cables

Bypass level indicators

Continuous level measurement via visual indication of the level without power supply

Applications
- Continuous level indication without power supply
- Indication of the level proportional to height
- Individual design and corrosion-resistant materials make the products suitable for a broad range of applications
- Chemical, petrochemical industry, oil and natural gas extraction (on- and offshore), shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry, pharmaceutical industry

Special features
- Process- and system-specific production
- Operating limits:
  - Operating temperature: T = -196 ... +450 °C
  - Operating pressure: P = vacuum to 400 bar \(^1\)
  - Limit density: \(\rho \geq 340 \text{ kg/m}^3\)
- Wide variety of different process connections and materials
- Mounting of level sensors and magnetic switches possible as an option
- Explosion-protected versions

\(^1\) Individual limit values. For application limits, the joint consideration of temperature and pressure is required.

Submersible pressure sensors

Hydrostatic level measurement

Applications
- Level measurement in rivers and lakes
- Control of sewage lift and pumping stations
- Monitoring of sewage, settling and rainwater retention basins
- Level measurement in vessel and storage systems for oils and fuels

Special features
- Slimline and hermetically sealed design up to 300 m water column
- Highly resistant versions available
- Explosion protection per ATEX, IECEx, FM and CSA
- Drinking water conformity per KTW and ACS
- Temperature output, HART® and low-power output signal for battery operation

LF-1
For superior applications

Accuracy
\( \pm 0.5 \text{ or } 1 \% \text{ of span} \)

Measuring range
0 … 0.1 to 0 … 6 bar

Output signal
- 4 … 20 mA (2-wire)
- 4 … 20 mA + HART® (2-wire)
- DC 0.1 … 2.5 V (3-wire)

Data sheet LM 40.04

LS-10
Standard version

Accuracy
\( \leq 0.5 \% \text{ of span} \)

Measuring range
0 … 0.25 to 0 … 10 bar

Output signal
4 … 20 mA (2-wire)

Data sheet PE 81.55

LH-20
High-performance

Non-linearity
\( \leq 0.2 \text{ or } 0.1 \% \text{ of span} \)

Measuring range
- 0 … 0.1 to 0 … 25 bar
- 0 … 1.6 to 0 … 25 bar abs.

Output signal
- 4 … 20 mA (2-wire)
- DC 0.1 … 2.5 V (3-wire)

Data sheet PE 81.56

Special feature
- Scaple measure range (optional)
- Resistant against the harshest environmental conditions
- Reliable and secure by double-sealed design
- Titanium case for especially high resistance (optional)
Continuous measurement with float for industrial applications

With reed measuring chain

Applications
- Level measurement of liquids in machine building
- Control and monitoring tasks for hydraulic power packs, compressors and cooling systems

Special features
- Media compatibility: Oil, water, diesel, refrigerants and other liquids
- Permissible medium temperature: -30 ... +120 °C
- Output signals for level and temperature (optional) as resistance output signal or 4 ... 20 mA current output
- Measuring principle: Reed-chain technology
- Accuracy, resolution: 12, 10, 6 or 3 mm

Continuous measurement with float for the process industry

Magnetostrictive

Applications
- High-accuracy level measurement for almost all liquid media
- Chemical, petrochemical industry, natural gas, offshore, shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry, pharmaceutical industry

Special features
- Process- and system-specific solutions possible
- Operating limits:
  - Operating temperature: T = -90 ... +400 °C
  - Operating pressure: P = vacuum to 100 bar
  - Limit density: ρ ≥ 400 kg/m³
- Resolution < 0.1 mm
- Wide variety of different electrical connections, process connections and materials
- Explosion-protected versions

FLM-S
Stainless steel version

- Process connection:
  - Mounting thread
  - Flange: DIN, ANSI
- Guide tube length: Max. 6,000 mm
- Pressure: 0 ... 200 bar
- Temperature: -90 ... +450 °C
- Density: ≥ 400 kg/m³
- Data sheet: LM 20.01

FLM-SP
Plastic version

- Process connection:
  - Mounting thread
  - Flange: DIN, ANSI
- Guide tube length: Max. 5,000 mm
- Pressure: 0 ... 16 bar
- Temperature: -10 ... +100 °C
- Density: ≥ 800 kg/m³
- Data sheet: LM 20.01

FLM-H
Hygienic version, for sanitary applications

- Process connection:
  - Clamp ISO 2852
  - Clamp DIN 32767
  - Aseptic thread DIN 11864-1
  - Aseptic liner DIN 11864-1

- Control and monitoring tasks for hydraulic power packs, compressors and cooling systems

Special features
- Media compatibility: Oil, water, diesel, refrigerants and other liquids
- Permissible medium temperature range: -30 ... +150 °C
- Up to 4 switching outputs freely definable as normally open, normally closed or change-over contact
- Optional temperature output signal, selectable as preconfigured bimetal switch or either Pt100 or Pt1000

Data sheet
LM 50.03, LM 50.04, LM 50.06
**RLS-4000**

Intrinsic safety Ex i

- **Switch points**: Up to 4 (normally closed, normally open, change-over contact)
- **Temperature output (optional)**: Normally closed, normally open, Pt100, Pt1000
- **Medium temperature**: -30 ... +80 °C (-30 ... +150 °C optional)
- **Guide tube length**: 60 ... 1,500 mm
- **Data sheet**: LM 50.07

**RLS-5000**

For the shipbuilding industry (bilge water tanks)

- **Material**: Stainless steel 1.4571
- **Switching output**: Normally closed, normally open, change-over contact
- **Medium temperature**: -40 ... +80 °C
- **Electrical output**: Marine cable, IP68 (8 m)
- **Test device**: Optional
- **Data sheet**: LM 50.08

**RLS-6000**

For water and wastewater

- **Switching output**: Normally closed, normally open, change-over contact
- **Density**: ≥ 1,000 kg/m³
- **Medium temperature**: -10 ... +60 °C
- **Guide tube length**: 150 ... 1,000 mm
- **Data sheet**: LM 50.09

**LSD-30**

Electronic level switch, with display

- **Measuring range**: Probe length 250, 370, 410, 520, 730 mm
- **Density**: ≥ 0.7 g/cm³ (NBR float)
- **Output signal**: 1 or 2 switching outputs (PNP or NPN), Analogue output (optional)
- **Process connection**: G ¼" NPT
- **Data sheet**: LM 40.01

**HLS-M1**

Plastic version, with cable outlet

- **Process connection**: ½" NPT (installation in the tank from outside), G ¼" (installation in the tank from inside)
- **Pressure**: 1 bar
- **Temperature**: -10 ... +80 °C
- **Material**: PP
- **Electrical connection**: Cable
- **Data sheet**: LM 30.06

**HLS-M2**

Stainless steel version, with cable outlet

- **Process connection**: ½" NPT (installation in the tank from outside), G ¼" (installation in the tank from inside)
- **Pressure**: 5 bar
- **Temperature**: -40 ... +120 °C
- **Material**: Stainless steel 1.4301
- **Electrical connection**: Cable or connector
- **Data sheet**: LM 30.06

Float switches for the process industry

Robust switches for liquid media

Applications
- Level measurement for almost all liquid media
- Pump and level control and monitoring of distinct filling levels
- Chemical, petrochemical industry, natural gas, offshore, shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry

Special features
- Large range of application due to the simple, proven functional principle
- For harsh operating conditions, long service life
- Operating limits: 
  - Operating temperature: $T = -196 \ldots +350 \, ^\circ C$
  - Operating pressure: $P = \text{vacuum} \to 40 \, \text{bar}$
  - Limit density: $\rho \geq 300 \, \text{kg/m}^3$
- Wide variety of different electrical connections, process connections and materials
- Explosion-protected versions

**ELS-S**

For lateral mounting with external chamber

- **External chamber**: Stainless steel
- **Process connection**: Threaded pipe connection GE10-LR galvanised steel
- **Pressure**: Up to 6 bar
- **Temperature**: -30 ... +300 °C
- **Data sheet**: LM 30.03

**ELS-A**

For lateral mounting with external chamber

- **External chamber**: Aluminium
- **Process connection**: Threaded pipe connection GE10-LR galvanised steel
- **Pressure**: Max. 1 bar
- **Temperature**: -30 ... +150 °C
- **Data sheet**: LM 30.03

**HLS-S**

Stainless steel version, for horizontal installation

- **Process connection**: Flange DIN, ANSI, EN
- **Pressure**: 0 ... 232 bar
- **Temperature**: -196 ... +350 °C
- **Density**: ≥ 600 kg/m³
- **Material**: Stainless steel, titanium
- **Data sheet**: LM 30.02

**HLS-P**

Plastic version, for horizontal installation

- **Process connection**: Flange DIN, ANSI, EN
- **Pressure**: 0 ... 3 bar
- **Temperature**: -10 ... +80 °C
- **Density**: ≥ 750 kg/m³
- **Material**: PP
- **Data sheet**: LM 30.02

**HLS-S Ex i**

Intrinsically safe stainless steel version for horizontal installation

- **Process connection**: DIN DIN 50 ... DN 100, PN 6 ... 160, EN 1092 DN 50 ... DN 100, PN 6 ... PN 160, ANSI 2" ... 4", class 150 ... 900
- **Mounting flange**: Square flange: DN 80 and DN 92 (other flanges on request)
- **Pressure**: Max. 6 bar
- **Temperature class**: T2, T3, T4, T5, T6
- **Ambient temperature at case**: 80 °C
- **Density**: ≥ 600 kg/m³
- **Material**: Stainless steel 1.4571
- **Data sheet**: LM 30.02

Optoelectronic switches for the process industry

For applications with limited mounting space

Applications
- Chemical, petrochemical, natural gas, offshore industries
- Shipbuilding, machine building, refrigerator units
- Power generating equipment, power plants
- Process water and drinking water treatment
- Wastewater and environmental engineering

Special features
- Temperature ranges from -269 … +400 °C
- Versions for pressure ranges from vacuum to 500 bar
- Special versions: High pressure, interface measurement
- Explosion-protected versions
- Signal processing is made using a separate model OSA-S switching amplifier

OLS-S, OLS-H

Optoelectronic switches for industrial applications

Applications
- Limit detection of liquids
- Machine tools
- Hydraulics
- Machine building
- Water technology

Special features
- For liquids such as oils, water, distilled water, aqueous media
- Compact design
- Mounting position as required
- Accuracy ±2 mm
- No moving components

Optoelectronic limit level switches – for general applications in machine building

**OLS-C01**
Level switch, standard version

- **Material**: Stainless steel, borosilicate glass
- **Process connection**: G ¼", G ½" or M12 x 1
- **Pressure**: Max. 25 bar
- **Temperature**: -30 ... +100 °C
- **Switching output**: 1 x PNP
- **Data sheet**: LM 31.31

**OLS-C02**
Level switch, with selectable switch length

- **Material**: Stainless steel, borosilicate glass
- **Process connection**: G ¼" or G ½"
- **Pressure**: Max. 25 bar
- **Temperature**: -30 ... +100 °C
- **Switch length**: 65 ... 1,500 mm
- **Switching output**: 1 x PNP
- **Data sheet**: LM 31.32

**OLS-C05**
Level switch, high-temperature version

- **Material**: Stainless steel, borosilicate glass
- **Process connection**: G ¼" or G ½"
- **Pressure**: Max. 25 bar
- **Temperature**: -40 ... +170 °C
- **Switching output**: 1 x PNP
- **Data sheet**: LM 31.33

Optoelectronic limit level switches – application specialists

**OLS-C51**

**Further information at www.wika.com**
Force transducers from WIKA can be delivered with affixed strain gauges or thin-film sensors. The span of the measuring ranges that can be delivered stretches from 0.5 N to over 10,000 kN. The strain gauge technology offers a large geometrical variety and high accuracy, and it is well suited for detecting even the smallest forces. Force transducers with thin-film sensors are very cost-effective for customer-specific solutions or OEM applications and also for safety-related use. They are particularly characterised by their long-term and temperature behaviour.

**F1211**
Compression force transducer to 1,000 kN
- Nominal force $F_{\text{nom}}$: 0 ... 1 to 0 ... 1,000 kN
- Relative linearity error: ±0.2 % $F_{\text{nom}}$
- Output signal: 2 mV/V
- Ingress protection: IP67
- Data sheet: FO 51.10

**F1222**
Miniature compression force transducer from 0.5 N
- Nominal force $F_{\text{nom}}$: 0 ... 0.5 to 0 ... 5,000 N
- Relative linearity error: ±1 % $F_{\text{nom}}$
- Output signal: 1 ... 10 mV/V/N
- Ingress protection: IP65
- Data sheet: FO 51.11

**F1224**
Miniature compression force transducer from 1 kN
- Nominal force $F_{\text{nom}}$: 0 ... 1 to 0 ... 500 kN
- Relative linearity error: ±0.5 % $F_{\text{nom}}$
- Output signal: 2 mV/V
- Ingress protection: IP65
- Data sheet: FO 51.12

**F2210**
Tension/compression force transducer, flat bar to 2,000 kN
- Nominal force $F_{\text{nom}}$: 0 ... 0.5 to 0 ... 2,000 kN
- Relative linearity error: ±1.5 % $F_{\text{nom}}$ tension o. pressure, ±0.3 % $F_{\text{nom}}$ tension a. pressure
- Output signal: 2 mV/V
- Ingress protection: IP67
- Data sheet: FO 51.14

**F2211**
Tension/compression force transducer, S-type to 50 kN
- Nominal force $F_{\text{nom}}$: 0 ... 0.02 to 0 ... 50 kN
- Relative linearity error: ±0.2 % $F_{\text{nom}}$
- Output signal: 2 mV/V (1 mV/V at 0.02 kN)
- Ingress protection: IP67, to 1 kN IP65
- Data sheet: FO 51.15

**F2220**
Miniature tension/compression force transducer, from 1.5 N
- Nominal force $F_{\text{nom}}$: 0 ... 1.5 to 0 ... 5,000 N
- Relative linearity error: ±1.0 % $F_{\text{nom}}$
- Output signal: 2 mV/V (to 5 N 15 mV/V)
- Ingress protection: IP65
- Data sheet: FO 51.15

**F2221**
Tension/compression force transducer from 0.01 kN
- Nominal force $F_{\text{nom}}$: 0 ... 0.01 to 0 ... 50 kN
- Relative linearity error: ±0.2 % $F_{\text{nom}}$
- Output signal: 2 mV/V
- Ingress protection: IP65
- Data sheet: FO 51.26

Load cells

Load cells are designed as a special form of force transducers for use in weighing equipment. They enable very high measurement accuracies between 0.01 % and 0.05 % $F_{\text{nom}}$. Typical and widely used load cell geometries are single-point load cells, bending and shear beam load cells, S-type load cells, pendulum load cells and compression force load cells. In addition, there are corresponding mounting kits and complete weighing modules available.

**F4817**

Single-point load cell to 2,000 kg

- Nominal force $F_{\text{nom}}$: 0 ... 100 to 0 ... 2,000 kg

Primary flow elements
The most common way to measure flow is differential-pressure flow measurement. This measuring principle has proven itself over many years and is applicable for all common types of media.

Our portfolio of primary flow elements includes orifice plates, orifice assemblies, meter runs, flow nozzles, Venturi tubes and averaging pitot tubes.

Restriction orifices
When the process requires a pressure drop, a restriction orifice can be installed in the line. The design must take into consideration the flow conditions, and the differential pressure required to avoid issues (cavitation, choking and noise).

Single- or multi-step restriction orifice solutions are selected depending on the differential pressure and medium. Single-bore or multi-bore options must be selected to ensure an acceptable noise level.

Pressure drop
When using a differential pressure flow meter a permanent pressure drop is always generated. The graph shows a comparison between the different types of differential-pressure flow measurement instruments. Pressure loss is shown as a percentage of the measured differential pressure.

The graph can assist in the selection of the best instrument for your application.

Example:
- Orifice plate
  - Differential pressure at full scale: 1,000 mbar
  - $\beta = \frac{d}{D} = 0.65$
  - % of permanent pressure loss: 58%
  - Permanent pressure loss: 580 mbar
- Flow nozzle
  - Venturi – 15° outlet
  - Venturi – 7° outlet

$\beta = \text{beta ratio} = \frac{d}{D}$
### Medium characteristics

Not all instruments can be used in all applications. The type of medium (gas, liquid or steam) and its conditions must be taken into account when selecting the right instrument for your medium condition.

The following selection chart will assist in choosing the right instrument:

<table>
<thead>
<tr>
<th>Orifice plate and related assemblies</th>
<th>Flow nozzle</th>
<th>Venturi tube</th>
<th>Averaging pitot tube</th>

Reynolds number

It is difficult to evaluate the many variables affecting the velocity profile for all flow meters and for all pipeline conditions. To combine medium properties (density and viscosity), flow rate and geometrical aspects the Reynolds number is used.

The table shows you the smallest possible Reynolds number that can be used with each instrument.
Orifice plates represent the most common primary flow elements in the world due to their proven technology and ease of installation and maintenance.

**Main characteristics**
- Maximum operating temperature up to 800 °C
- Maximum operating pressure up to 400 bar
- Suitable for liquid, gas and steam flow measurement
- Accuracy: Uncalibrated ±0.5 … 2.5 %
- Repeatability of measurement 0.1 %

**FLC-OP**

**Orifice plate**

- Standards: ISO 5167-2, ASME MFC3M
- Pipe size: ≥ 2", ≥ 50 mm
- β: Depending on version
- Accuracy 1): Uncalibrated ±0.5 … 2.5 %
- Data sheet: FL 10.01

**FLC-CO**

**Compact orifice plate for the direct mounting of differential pressure transmitters**

- Standards: ISO 5167-2, ANSI/ASME B16.5
- Pipe size: 2 … 14", DN 50 … 350
- β: Depending on version
- Accuracy: ≤ ±0.5 %
- Data sheet: FL 10.10

**Versions**

- **Square edge orifice plates** (standard version)
  This design is intended for general applications in clean liquids and gases.

- **Quarter circle and conical entrance orifice plates**
  The best choice for measurement of liquids with low Reynolds number.

- **Segmental orifice plates**
  For measurements with two-phase, dirty and particle-laden media.

- **Eccentric orifice plates**
  The application areas are similar to the segmental version. However, an eccentric orifice plate is the better solution for smaller pipe diameters.

1) The actual measuring deviation is specified during the engineering phase.
Orifice flanges are intended for use instead of standard pipe flanges when an orifice plate or flow nozzle must be installed. Pairs of pressure tappings are machined into the orifice flange, making separate orifice carriers or tappings in the pipe wall unnecessary.

**Main characteristics**
- Wide range of materials available
- The number and type of pressure tapping (flange tap or corner tap) can be manufactured to customer requirements
- Special assemblies can be designed on request

</tbody>
</table>

Annular chambers are designed to be mounted between standard pipe flanges. Versions are available to suit all common flange standards, including DIN and ANSI B16.5.

**Main characteristics**
- Standard material is 316/316L stainless steel, but a wide range of alternative materials is available
- Gaskets are included in the scope of delivery (as standard, 4.4 mm thick spiral-wound gasket 316/graphite filler, unless requested otherwise)
To ensure high accuracy in the flow measurement of liquids, gases and steam the primary flow element is supplied as an assembly incorporating the upstream and downstream pipe sections required by ISO 5167-1:2003. This assembly is known as a “meter run”.

**Main characteristics**
- Nominal width < 1 ½”
- Nominal pressure rating 300 … 2,500 depending on model/version
- Wide range of materials available

A calibration of the instrument can be performed if higher accuracy is required.

An integral orifice plate is normally selected when the pipe diameter is 1 ½” or smaller and the medium is clean. An extremely compact installation can be ensured as the pressure sensor can be mounted directly onto the meter run. Without a calibration, an accuracy of ±1 … 2 % can be expected, the actual values will be confirmed during the engineering phase.
Flow nozzles

A flow nozzle consists of a convergent section with a rounded profile and a cylindrical throat. This design is generally selected for steam flow measurement at high velocity.

To reduce pressure loss an axisymmetric solution, called a Venturi nozzle, can be offered. It combines the standard features of a flow nozzle with a divergent section.

**Main characteristics**
- Suitable for liquid, gas and steam flow measurement
- Optimum solution for measuring the flow of steam
- Accuracy: Uncalibrated ±0.8 … 2 %
- Repeatability of measurement 0.1 %
- Ensure a lower pressure loss compared to orifice plate family.

A Venturi tube is a reliable and easily-managed and maintained instrument that can measure a wide range of clean liquids and gases.

The main advantage of a Venturi tube over other differential pressure flow measuring instruments is the higher pressure recovery and the lower upstream and downstream straight tube length requirements.

**Main characteristics**
- In accordance with ISO 5167-4 & ASME MFC-3M standards
- Fabricated from plate or machined from bar/forgings
- Flanged or weld-in construction
- Wide range of materials available
- Pipe sizes from 50 ... 1,200 mm
- Wide variety of pressure tappings available
- Calibration possible on request
- Accuracy: Uncalibrated ±1 ... 1.5 %

*The actual measuring deviation is specified during the engineering phase*
FloTec (averaging pitot tubes)

Flotec (a multi-port, averaging pitot tube) measures the difference between the static pressure and the dynamic pressure of the media in the pipe. The volumetric flow is calculated from that difference using Bernoulli’s principle and taking into account the pipe inner diameter. Using four dynamic ports this instrument is able to evaluate a better velocity profile inside the pipe. This ensures a higher accuracy in the flow measurement.

Main characteristics
- Low installation costs
- Long-term accuracy
- Minimal permanent pressure loss
- Fixed and extractable versions available

Vortex shedding frequency
Depending on the inner diameter, the medium characteristics and the Reynolds number, a vortex will be generated around the pitot tube. A support mounted on the opposite side of the pipe can be supplied should the natural frequency of the pitot coincide with the vortex shedding frequency. The necessity test is performed during the design phase.

When a reduction of pressure or a limitation of the flow rate is required, a restriction orifice must be inserted into the pipeline. Our technical department will produce the correct design for the restriction orifice, depending on customer requirements and flow conditions.

If high differential pressures, a change in phase or sonic issues can occur, a more-complex design will be required. The solution in these cases is to decrease the differential pressure in several steps, avoiding all the issues created by these factors. This solution is called multi-step restriction orifice.

**Main characteristics**
- Multi-step restriction orifices to reduce the pressure by more than 50% of the inlet value
- Multi-bore designs to reduce the noise level

Flow switches are used for the display and monitoring of the flow of liquid and gaseous media. The instruments feature a high switching accuracy and functional safety, low switch hysteresis and continuous switch point setting by the operator.

The wide selection of WIKA flow switches also includes viscosity-compensated models and ATEX-certified instruments for use in hazardous environments.

### FWS

**For liquid and gaseous media**

- **Material**: Stainless steel, brass
- **Process connection**: G ¼ … G 1½
- **Flow range**: 0.005 … 250 l/min (water), 0.2 … 1,450 NL/min (air)
- **Output**: Optionally pointer, sight glass, reed contact
- **Data sheet**: LM 31.31

### FSD-3

**For liquid media**

- **Measuring range**: Water: 5 … 150 cm/s, Oil: 3 … 300 cm/s
- **Output signal**: For flow and temperature
- **Process connection**: G ¼ A, G ½ A, ¼ NPT, ½ NPT, M18 x 1.5
- **Data sheet**: FL 80.01
Digital pressure gauges

High-quality digital pressure gauges from WIKA

Precision digital pressure gauges are suitable for stationary and also mobile measurement and display of pressures. In addition, a digital pressure gauge can be used as a pressure reference and enables the easy testing, adjustment and calibration of other pressure measuring equipment directly on site. Through efficient measuring cells with electronic linearisation of the characteristic curve, a high accuracy is achieved.

### CPG500
Digital pressure gauge

- **Measuring range**: -1 ... 16 bar to 0 ... 1,000 bar
- **Accuracy**: 0.25 %
- **Special feature**: Simple operation using 4 buttons
- **Special feature**: Robust case with protective rubber cap, IP67
- **Data sheet**: CT 09.01

### CPG1500
Precision digital pressure gauge

- **Measuring range**: -1 ... 10,000 bar
- **Accuracy**: (% of span) down to 0.025 % FS
- **Special feature**: Integrated data logger
- **Special feature**: WIKA-Cal compatible
- **Special feature**: Data transfer via WIKA-Wireless
- **Special feature**: Password protection possible
- **Special feature**: Robust case IP65
- **Data sheet**: CT 10.51

### WIKA-Cal
Calibration software, accessories for digital pressure gauges

- Creation of calibration certificates for mechanical and electronic pressure measuring instruments
- Fully automatic calibration with pressure controllers
- For the recording of certificate-relevant data in combination with the CalibratorUnits of the CPU6000 series
- Determination of the required mass loads for pressure balances
- Calibration of gauge pressure measuring instruments with absolute pressure references and vice versa
- **Data sheet**: CT 95.10

### CPG-KITH
Hydraulic service kit

- Simple testing and adjustment of pressure measuring instruments
- Kit consists of a CPG1500 reference instrument and a CPP700-H hand pump (hydraulic P_max 700 bar) or CPP1000-H (hydraulic, P_max 1,000 bar)

### CPG-KITP
Pneumatic service kit

- Simple testing and adjustment of pressure measuring instruments
- Kit consists of a CPG1500 reference instrument and a CPP30 hand pump (pneumatic P_max 30 bar)
Hand-helds, calibrators

Hand-helds are portable calibration instruments for mobile use for the accurate measurement and recording of pressure profiles. There are interchangeable pressure sensors with measuring ranges of up to 10,000 bar available for the instruments. Through this, hand-helds are particularly suitable as test instruments for a large variety of applications in the widest range of industries. Data recorded in the hand-held can be evaluated via PC software, some instruments document calibrations in the internal memory, which can later be read on a PC. Optionally, a calibration certificate can be generated with our calibration software WIKA-Cal.

### Complete test and service cases

These cases can be assembled exactly to your requirements. Thus you will be fully equipped on site!
Hand-helds, calibrators

**CPH7000**
Portable process calibrator

- Measuring range: -1 … 25 bar
  (-1 … 10,000 bar with CPT7000)
- Accuracy: 0.025 % FS
- Special feature:
  - Integrated pressure generation
  - Measurement of pressure, temperature, current, voltage, ambient conditions
  - Supply of pressure, current and voltage
  - Calibration function/data logger/switch test

Data sheet: CT 15.51

**Pascal ET**
Hand-held multi-function calibrator

- Measuring range:
  - 0 … 100 mA, 0 … 80 V, 5 … 10,000 Ω
  - 0 … 50 kHz
  - -190 … +1,200 °C (type J)
  - -200 … +850 °C (Pt100)
- Accuracy: 0.025 % FS
- Special feature:
  - Large display with touchscreen
  - Integrated data logger and calibration function
  - Measurement and simulation of temperature, current, voltage, resistance, frequency, pressure
  - HART® communication

Data sheet: CT 18.02

**CPH7650**
Portable pressure calibrator

- Measuring range: -1 … 6,000 bar with CPT6000
  Supply elec. pump: -0.85 … +20 bar
- Accuracy: 0.025 % FS
- Special feature:
  - Calibration function
  - Generation/measurement of 4 … 20 mA and DC 24 V voltage supply for transmitters
  - Interchangeable reference sensors CPT6000
  - High-performance electric pump

Data sheet: CT 17.02

**Pascal100**
Hand-held multi-function calibrator

- Measuring range: -1 … 100 bar
  0 … 50 kHz
  0 … 10 kOhm
  -100 … +100 mA
  -100 … +100 mV
- Accuracy: 0.025 % FS

# Precision pressure measuring instruments

Precision pressure measuring instruments are electrical measuring systems which convert pressure into an electrical signal and optionally visualise it. Precise pressure transmitters and process transmitters are used for the monitoring and control of particularly sensitive processes. Due to the low, DKD/DAkkS certified measurement uncertainty of down to 0.008 % of the entire measuring chain, the particularly accurate instruments find their primary applications as a factory/working standard for testing and/or calibrating a variety of pressure measuring instruments.

Further information at www.wika.com
Pressure controllers

Pressure controllers are electronic controllers which quickly and automatically provide a pressure based on a supply pressure. Due to the high accuracy and control stability, pressure controllers are especially suitable as references for production lines and laboratories, in order to carry out automatic testing and/or calibration of all types of sensors.

**WIKI pressure controllers: Always the right calibration solution**

CPC2000
Low-pressure version

- Measuring range: 0 ... 1 to 0 ... 1,000 mbar
- Accuracy: 0.1/0.3 % (for 0 ... 1 mbar)
- Medium: Ambient air
- Special feature: Integrated pressure generation
- Special feature: Integrated rechargeable battery
- Data sheet: CT 27.51

CPC4000
Industrial pressure controller

- Measuring range: 0 ... 0.35 to 0 ... 210 bar
- Accuracy: 0.02 %
- Medium: Dry, clean air or nitrogen
- Special feature: Up to 2 sensors
- Special feature: Fast control speed
- Special feature: Leak test function
- Special feature: Automatic contamination protection (optional)
- Data sheet: CT 27.40

CPC6050
Modular pressure controller

- Measuring range: 0 ... 0.025 to 0 ... 210 bar
- Accuracy: 0.01 %
- Medium: Dry, clean air or nitrogen
- Special feature: Up to 2 control/measuring channels with 2 sensors each
- Special feature: Sensors exchangeable
- Special feature: Switch test function
- Special feature: Auto-channel for both controllers
- Special feature: Automatic contamination protection (optional)
- Data sheet: CT 27.62
## Pneumatic high-pressure controllers

### CPC7000
- **Pneumatic high-pressure controller**
- **Measuring range**: 0 ... 100 bar to 0 ... 700 bar
- **Accuracy**: 0.01 %
- **Medium**: Nitrogen
- **Special feature**: ■ Robust and low-wear valve technology with long-term stability
  ■ Up to three interchangeable sensors
  ■ 6 x digital I/O
  ■ High pneumatic safety
- **Data sheet**: CT 27.63

### CPC8000
- **Precision version**
- **Measuring range**: 0 ... 0.035 to 0 ... 400 bar
- **Accuracy**: 0.01 % ... 0.008 %
- **Medium**: Dry, clean air or nitrogen
- **Special feature**: ■ Excellent control stability and pressure control without overshooting
  ■ Up to three interchangeable sensors
  ■ Optional barometer for automatic conversion of the pressure type
- **Data sheet**: CT 28.01

### CPC8000-H
- **High-pressure version**
- **Measuring range**: 0 ... 100 to 0 ... 1,600 bar
- **Accuracy**: 0.014 % ... 0.01 %
- **Medium**: Hydraulic oil or water
- **Special feature**: ■ High stability, also for large volumes
  ■ Up to two interchangeable reference sensors
  ■ Automatic flooding
  ■ Hydraulic liquids available, e.g. Sebacate, Shell Tellus 22, Krytox, FC77
- **Data sheet**: CT 28.05

## Hydraulic pressure controller

### CPC8000-H
- **High-pressure version**
- **Measuring range**: 0 ... 100 to 0 ... 1,600 bar
- **Accuracy**: 0.014 % ... 0.01 %
- **Medium**: Hydraulic oil or water
- **Special feature**: ■ High stability, also for large volumes
  ■ Up to two interchangeable reference sensors
  ■ Automatic flooding
  ■ Hydraulic liquids available, e.g. Sebacate, Shell Tellus 22, Krytox, FC77
- **Data sheet**: CT 28.05

### CPA8001
- **Air data test set**
- **Measuring range**: ■ Altitudes to 100,000 ft
  ■ Speeds to 1,150 knots
- **Accuracy**: 0.01 % ... 0.009 %
- **Medium**: Dry, clean air or nitrogen
- **Special feature**: ■ Excellent control stability, even with rate control
  ■ Overshoot-free control
  ■ RVRM compatible
  ■ Configurations Ps/Pt, Ps/Qc
- **Data sheet**: CT 29.01

## For aviation

Air data test sets are specifically developed to convert the pressure to be controlled into a height or rate of climb and velocity. As a result of the high accuracy, control stability and ability to simulate altitude and velocity, an air data test set is particularly suitable as a reference for aircraft workshops and also for instrument manufacturers and calibration laboratories in the aviation industry, in order to make calibrations on sensors and displays.
## Pressure balances

### Industrial series

Compact and competitively priced dead-weight testers for use on site or for maintenance and service

The compact dimensions and low weight are key features of these dead-weight testers for their daily use in service and maintenance. With their integrated pressure generation and purely mechanical measuring principle, they are also specifically suited to on-site applications.

High-performance primary standards with excellent running characteristics for use in calibration laboratories

Through modern instrument design with excellent equipment features, the highest demands of operator convenience and performance are fulfilled. The selection of dual-range piston-cylinder systems with automated changing between ranges can ensure this measurement uncertainty over a large pressure range, even with a single measuring system.

### CPB5000
- **Pneumatic version**
- Measuring range: -0.03 … -1 to 0.4 … 100 bar
- Accuracy: 0.015 … 0.008 %
- Medium: Non-corrosive gases
- Special feature: Patented system for fast piston-cylinder exchange
- Data sheet: CT 31.01

### CPB5000HP
- **High-pressure version**
- Measuring range: 25 … 2,500 to 25 … 6,000 bar
- Accuracy: 0.025 … 0.02 %
- Medium: Special oil
- Special feature: Robust instrument base with integrated high-pressure generation
- Data sheet: CT 31.51

### CPB5800
- **Hydraulic version with dual-range piston-cylinder systems**
- Measuring range: 1 … 120 to 1 … 1,400 bar
- Accuracy: 0.015 … 0.008 %
- Medium: Special oil or others on request
- Special feature: Dual-range piston-cylinder systems with fully automated changing between ranges
- Instrument base can now also be combined with the CPB5800 piston-cylinder systems
- Data sheet: CT 31.11

### CPB5600DP
- **Differential pressure version**
- Measuring range: 0.03 … 2 to 25 … 1,600 bar
- Accuracy: 0.015 … 0.008 %
- Medium: Non-corrosive gases or special oil
- Special feature: Two complete pressure balances within one case for real differential pressure measurements under static pressure
- Data sheet: CT 31.56

### CPS5000
- **Hydraulic single-range piston-cylinder systems**
- Special feature: For the highest demands on accuracy and performance
- Can be combined with the CPB5800 instrument base
- Data sheet: CT 31.01

### CPU6000 series
- **CalibratorUnit**
- Determination of the required mass loads or the reference pressure for calibration with pressure balances
- Recording of certificate-relevant data
- Calibration of gauge pressure measuring instruments with absolute pressure references and vice versa
- Easy calibration of pressure transmitters through the voltage supply and multimeter function
- Data sheet: CT 35.02
Pressure balances

High-end version

High-accuracy and high-performance primary standards with excellent operating characteristics, based on the physical principle of Pressure = Force/Area

The direct measurement of the pressure \( p \approx F/A \), as well as the use of high-quality materials enable this small measurement uncertainty, in conjunction with an excellent long-term stability (recommended recalibration interval of five years in accordance with the German Calibration Service DKD/DAkkS). Furthermore, an automatic mass handling system and pressure generation ensure fully automated calibration. The pressure balance has therefore been used for years in factory and calibration laboratories in industry, national institutes and research laboratories, and also in production by sensor and transmitter manufacturers.

Calibration software

Easy and fast creation of a high-quality calibration certificate

The WIKA-Cal calibration software is used for generating calibration certificates for mechanical and electronic pressure measuring instruments and is available as a demo version for a cost-free download on the homepage. A template helps the user and guides him through the creation process of a document. Calibration certificates can be created with the Cal-Template and logger protocols can be created with the Log-Template.

In order to switch from the demo version to a full version of the respective template, a USB key with a licence upgrade has to be purchased. The pre-installed demo version automatically changes to the selected full version when the USB key is inserted and is available as long as the USB key is connected to the computer.

- **Cal Demo**
  Generation of calibration certificates limited to 2 measuring points, with automatic initiation of pressures via a pressure controller.

- **Cal Light**
  Generation of calibration certificates with no limitations on measuring points, without automatic initiation of pressures via a pressure controller.

- **Cal**
  Generation of calibration certificates with no limitations on measuring points, with automatic initiation of pressures via a pressure controller.

- **Log Demo**
  Creation of data logger test reports, limited to 5 measured values.

- **Log**
  Creation of data logger test reports without limiting the measured values.

**Multicalibration**

The additionally charged "Multicalibration" licence can be ordered in addition to Cal Light or Cal. With this, it is possible to calibrate, incl. documentation, up to 7 test items simultaneously. The prerequisite is that the test items are of the same instrument model, measuring range and accuracy. During the parallel calibration, the measuring window for each test item can be viewed via a table view.

The multicalibration is currently only available for electrical measuring instruments.

For pressure sensors, it is possible to use either several multimeters (such as model CPU6000-M, for example) or a multiplexer to which all multimeters will be connected. As multiplexers, Agilent 34970A and Netscanner 9816 are supported. The correct cabling is the responsibility of the operator.
Pressure generation

Portable pressure generation

Hand test pumps serve as pressure generators for the testing, adjustment and calibration of mechanical and electronic pressure measuring instruments through comparative measurements. These pressure tests can take place in the laboratory, workshop, or on site at the measuring point.

Comparison test pumps serve as pressure generators and controllers for the testing, adjustment and calibration of mechanical and electronic pressure measuring instruments. Through their solid housing this pressure pumps are particularly suitable for the work in a laboratory or workshop.

**CPP120-X**

**Pneumatic comparison test pump**

- Measuring range: 0 … 120 bar
- Medium: Clean, dry, non-corrosive gases
- Special feature: Accurate pressure setting, Robust industrial series
- Data sheet: CT 91.03

**CPP1200-X**

**Hydraulic comparison test pump**

- Measuring range: 0 … 1,200 bar
- Medium: Oil or water
- Special feature: Integrated tank, Dual-area spindle pump, Robust industrial series
- Data sheet: CT 91.08

**CPP4000-X**

**Hydraulic comparison test pump**

- Measuring range: 0 … 1,200 bar
- Medium: Oil or water
- Special feature: Integrated tank, Dual-area spindle pump, Robust industrial series
- Data sheet: CT 91.09

**CPP1000-X, CPP1600-X**

**Hydraulic comparison test pump**

- Measuring range: 0 … 1,000 to 0 … 1,600 bar
- Medium: Oil or water
- Special feature: Integrated tank, Robust laboratory version with priming pump, Compact industrial series with priming pump
- Data sheet: CT 91.12

**CPP7000-X**

**Hydraulic comparison test pump**

- Measuring range: 0 … 7,000 bar
- Medium: Sebacate oil
- Special feature: Integrated tank, Robust laboratory version with priming pump
- Data sheet: CT 91.13

Reference thermometers

Highly accurate temperature measurement with reference thermometers

Reference thermometers (standard thermometers) are, due to their excellent stability and their geometrical adaptations, ideally suited for applications in industrial laboratories. They enable easy comparative calibration in baths, in tube furnaces and in dry-well calibrators. The advantage of reference thermometers is the wide temperature range, and with this, their flexible operation. Furthermore, with their low drift, a long service life is ensured.

**CTP2000**
Platinum resistance thermometer

- Measuring range: -200 ... +450 °C
- Stability: < 50 mK after 100 h at 450 °C
- Dimensions: Ø 4 mm, l = 500 mm
- Special feature: 4-wire connection, Ends with 4 mm banana plugs
- Data sheet: CT 61.10

**CTP5000**
Reference thermometer

- Measuring range: -196 ... +660 °C
- Probe type: Pt100, Pt25
- Dimensions: Depending on version
- Special feature: Free cable ends, DIN or SMART connector
- Data sheet: CT 61.20

**CTP5000-T25**
Reference thermometer

- Measuring range: -196 ... +660 °C
- Probe type: Pt25
- Dimensions: d = 7 mm, l = 480 mm
- Special feature: Free cable ends, DIN or SMART connector
- Data sheet: CT 61.25

**CTP9000**
Thermocouple

- Measuring range: 0 ... 1,300 ºC
- Thermocouple: Type S per IEC 584, class 1
- Dimensions: Ø 7 mm, l = 600 mm (incl. handle)
- Special feature: Cold junction optional, 1,500 mm cable, Ends with 4 mm banana plugs
- Data sheet: CT 61.10
Hand-holds

Hand-holds are portable calibration instruments for mobile use for the accurate measurement and recording of temperature profiles. For the instruments there are various designs of thermometers available. Through this, hand-holds are particularly suitable as test instruments for a large variety of applications in the widest range of industries.

Data recorded in the hand-held can be evaluated via PC software, some instruments document calibrations in the internal memory, which can later be read on a PC. Optionally, a calibration certificate can be generated with our calibration software WIKA-Cal.

Calibration baths are electronic controllers which automatically, quickly and with the help of a liquid supply a temperature Due to the high reliability, accuracy and exceptional homogeneity in the measuring chamber, calibration baths are particularly suitable as a factory/working standard for the automatic testing and/or calibration of the widest range of temperature probes - independent of diameter. A special micro calibration bath design enables on-site applications.

**CTB9100**

**Micro calibration bath**

- **Measuring range**: -35 ... +255 °C

Portable temperature calibrators

Efficient calibration with temperature calibrators from WIKA

Portable temperature calibrators (dry-well calibrators) are electronic controllers which automatically, quickly and dryly supply a temperature. Due to the high reliability, accuracy and simple operation, portable temperature calibrators are particularly suitable as a factory/working standard for the automatic testing and/or calibration of temperature measuring instruments of all types.

Resistance thermometry bridges

By using built-in or external standard resistors, resistance thermometry bridges measure resistance ratios with high accuracy, which are indicative of the temperature, among other things. These instruments are not only used in the field of temperature measurement, but – due to their high accuracy – also in electrical laboratories.

**CTR2000**
Precision thermometer

- Measuring range: -200 ... +850 °C
- Accuracy: ±0.05 K (4-wire), ±0.03 K (3-wire)
- Probe type: Pt100, Pt25
- Special feature: 3-wire measurement (optional), Up to 8 channels integrated in the instrument (optional)
- Data sheet: CT 60.10

**CTR3000**
Multi-functional precision thermometer

- Measuring range: -210 ... +1,820 °C
- Accuracy: ±0.005 K (4-wire), ±0.03 K (3-wire), ±0.004 % + 2 µV for thermocouples
- Probe type: Pt100, Pt25
- Special feature: Versatile applications by measuring thermocouples and resistance thermometers, Logger and scan functions, Up to 44 channels possible
- Data sheet: CT 60.15

**CTR5000**
Precision thermometer

- Measuring range: -200 ... +962 °C
- Accuracy: ±0.01 K, optional ±0.005 K
- Probe type: Pt100, Pt25
- Special feature: Integrated data logger (optional), Up to 64 channels
- Data sheet: CT 60.20

**CTR6000**
DC resistance thermometry bridge

- Measuring range: -200 ... +962 °C
- Accuracy: ±3 mK (full range)
- Probe type: PRT, thermistors or fixed resistors
- Special feature: Expandable to up to 60 channels (optional), Internal resistors 25 Ω, 100 Ω, 10 kΩ, 100 kΩ
- Data sheet: CT 60.30

**CTR6500**
AC resistance thermometry bridge

- Measuring range: -200 ... +962 °C
- Accuracy: 0.1 ... 1.25 mK depending on resistance ratio
- Probe type: SPRT, PRT or fixed resistors
- Special feature: Expandable to up to 60 channels (optional), Internal resistors 25 Ω, 100 Ω, AC technology
- Data sheet: CT 60.40

**CTR9000**
Primary-standard resistance thermometry bridge

- Measuring range: 0 ... 260 Ω
- Accuracy: ±0.01 K, optional ±0.005 K
- Probe type: SPRT, PRT or fixed resistors
- Special feature: Expandable to up to 60 channels (optional), 4 selectable standby currents possible (optional), AC technology
- Data sheet: CT 60.80
Standard reference resistors, AC/DC

**Electrical comparison standard**

Reference resistors with high-accuracy, fixed resistance values, which are used in connection with resistance thermometry bridges. They are also used as standards in accredited electrical laboratories.

### Connections of the reference resistor, model CER6000-RR

Reference resistor, model CER6000-RR with 100 Ω

Reference resistor, model CER6000-RR with different resistance range
Electrical calibration instruments are used for calibration in industry (laboratories, production, workshops), in calibration service companies and in quality assurance. They are portable and mobile and are particularly notable for their low measurement uncertainty and high scope of operation. For the electrical calibration, the multi-function calibrators CPH7000, Pascal ET and Pascal 100 can also be used.

**CEP7000**

**Hand-held temperature calibrator**

- Measuring range:
  - -10 ... +75 mV, 5 ... 3,200 Ω
  - -200 ... +1,200 °C (type J)
  - -200 ... +800 °C (Pt100)
- Accuracy: 0.4 °C (type J), 0.33 °C (Pt100)
- Special feature: Measurement and simulation of thermocouples and resistance thermometers
- Data sheet: CT 82.01

**CEP6000**

**Hand-held multi-function calibrator**

- Measuring range:
  - 0 ... 24 mA, 0 ... 30 V, 5 ... 4,000 Ω
  - 2 CPM ... 10 kHz
  - -210 ... +1,200 °C (type J)
  - -200 ... +800 °C (Pt100)
- Accuracy: 0.015 %
- Special feature: Measurement and simulation of thermocouples, resistance thermometers, resistance, current, voltage, frequency, pulse and pressure
- Data sheet: CT 83.01

**CED7000**

**High-precision process calibrator**

- Measuring range:

  - -210 ... +1,200 °C (type J)
  - -200 ... +800 °C (Pt100)
- Accuracy: 0.003 %
- Special feature: High-precision measurement and simulation of thermocouples and resistance thermometers, resistance, current, voltage and pressure
- Data sheet: CT 85.51
Accessories

From individual components … to complete turnkey kits

The following accessory components are the ideal complement to the individual calibration instruments. Thus a complete solution is not only quickly and easily configured, but can also be installed in the same manner. The various packages complete the product programme for calibration technology and can be used in many different applications.

Customer-specific drilled inserts, silicone oil suited for calibration in micro calibration baths and interface cables complete the product portfolio for temperature.

You can find a detailed description in our catalogue “Accessories for calibration technology”.

Pressure supply cases
Pressure and vacuum supply packages

Temperature accessories
Test and calibration systems for workshops and laboratories

**Turnkey customer-specific systems for adjustment and calibration of pressure and temperature measuring instruments**

Precise calibration instruments are the starting point for resolving your test requirements, even though they are only one component of a high-performance calibration system. From our extensive product range, we can design you a complete and individual solution with adaptability for test items, pressure and vacuum supply, components for pressure control and fine adjustment, through to voltage supply and multimeters for the calibration of electrical test items.

Whether built-in to test benches, mobile test carts or 19" racks and supplemented with user-friendly calibration software, you will get a complete system, tailored to your requirements with the desired level of automation. The use of high-quality proven components, ergonomic usability and a cost-effective overall concept with high customer benefit are made a priority. Take advantage of our experience and the proven operation of such systems in WIKA’s own accredited laboratories and manufacturing facilities.

### Adjustment and calibration benches

- **Measuring range**
  - 1 … 400 bar pneumatic
  - 10 … 1,600 bar hydraulic
- **Accuracy**
  - Depending on the measuring devices used
- **Medium**
  - Compressed air, nitrogen, oil or water
- **Special feature**
  - Provision of pressure in workshops and laboratories

### Mobile calibration benches

- **Measuring range**
  - Customer-specific
- **Accuracy**
  - Down to 0.008 %
- **Medium**
  - Compressed air, nitrogen, oil or water
- **Special feature**
  - Self-contained, mobile calibration system for workshops and on-site service

### Automated pressure calibration systems

- **Measuring range**
  - Customer-specific
- **Accuracy**
  - Down to 0.008 %
- **Medium**
  - Compressed air, nitrogen, oil or water
- **Special feature**
  - Complete turnkey system

### Automated temperature calibration systems

- **Measuring range**
  - Customer-specific
- **Stability**
  - Up to 0.001 K
- **Medium**
  - Water, alcohol, silicone oil or salt
- **Special feature**
  - Complete turnkey system

### Test systems

- **Measuring range**
  - Customer-specific
- **Accuracy**
  - Down to 0.008 %
- **Medium**
  - Compressed air, nitrogen, oil or water
- **Special feature**
  - Measurement parameters pressure, temperature and electrical measurands

### Complete setup of laboratories

- **Measuring range**
  - Customer-specific
- **Accuracy**
  - Measurand pressure up to 0.008 %
  - Measurand temperature up to 0.001 K
- **Special feature**
  - Complete solutions from one source - from factory calibration laboratories through calibration vehicles up to national laboratories

Whether built-in to test benches, mobile test carts or 19" racks and supplemented with user-friendly calibration software, you will get a complete system, tailored to your requirements with the desired level of automation. The use of high-quality proven components, ergonomic usability and a cost-effective overall concept with high customer benefit are made a priority. Take advantage of our experience and the proven operation of such systems in WIKA’s own accredited laboratories and manufacturing facilities.
Test stands and calibration systems for production

From consultation through design to implementation - all from one source.
Our particular strength lies in the project planning, development and the building of complete, individual, application-specific systems - from simple manual work stations through to fully automated test systems in production lines - for the following applications:

Calibration and adjustment of
- Pressure sensors
- Pressure transmitter
- Process transmitters

The precise interaction of measurement technology, test system mechanics and control components is a top priority here. The complete solutions are available in the widest variety of build stages incl. tempering units, workpiece transport systems, workpiece fixtures and electrical and pressure-side contacting. Furthermore, there is also the possibility of integrating mounting or labelling operations on the test components into the overall concept. You can be assured of our capabilities.

19” test and calibration racks for pressure sensors

- Measuring range: Customer-specific
- Accuracy: Down to 0.008 %
- Special feature: Compact units with CPC series pressure controllers, working pressure supply, electrical supply and signal evaluation for the test items

Batch testing systems for pressure sensors

- Measuring range: Customer-specific
- Accuracy: Down to 0.008 %
- Temperature range: -40 … +140 °C
- Special feature: With retractable tempering chamber, workpiece carrier for up to 200 pressure sensors, electrical and pressure-side contacting

Inline calibration systems for pressure sensors

- Measuring range: Customer-specific
- Accuracy: Down to 0.008 %
- Temperature range: -40 … +140 °C
- Special feature: Integration into customer’s production line, linking multiple tempering chambers, automatic changeover of electrical and pressure-side contacts
Calibration service

Our calibration laboratories have been calibrated for pressure and temperature for over 30 years. Since 2014, our calibration laboratory has also been accredited for the electrical measurands DC current, DC voltage and DC resistance. Recently, factory calibration for force and length measuring instruments has been expanding our portfolio.

Manufacturer-independent calibration - fast and precise for …

**Pressure**

- -1 bar ... +8,000 bar (to +9,500 bar possible with factory calibration)
- Calibration using working standards (precise electrical pressure measuring instruments) or high-accuracy reference standards (pressure balances)
- With an accuracy of 0.003 % ... 0.01 % of reading
- In accordance with the directives DIN EN 837, DAkkS-DKD-R 6-1 or EURAMET cg-3

**Temperature**

- -196 °C ... +1,200 °C
- Comparative calibration in calibration baths and tube furnaces with an accuracy of down to 1.5 mK
- Calibration at fixed points of ITS90 with the smallest possible measurement uncertainties
  - Triple point of mercury (-38.8344 °C)
  - Triple point of water (0.01 °C)
  - Melting point of gallium (29.7646 °C)
  - Solidification point of tin (231.928 °C)
  - Solidification point of zinc (419.527 °C)
  - Solidification point of aluminium (660.323 °C)
- In accordance with the appropriate DKD/DAkkS directives

- ISO 9001 certified
- DKD/DAkkS accredited (in accordance with DIN EN ISO/IEC 17025)
- Cooperation in the DKD/DAkkS working groups
- Over 60 years of experience in pressure and temperature measurement
- Highly qualified, individually trained personnel
- Latest reference instruments with the highest accuracy
## Calibration

### Current, voltage, resistance
- DC current from 0 mA ... 100 mA
- DC voltage from 0 V ... 100 V
- DC resistance from 0 Ω ... 10 kΩ
- In accordance with the directives VDI/VDE/DGQ/DKD 2622

### Force
- 2.5 N ... 6 MN
- Factory calibration
- With a system accuracy of up to 0.01 % with pressure loading or 0.02 % with tensile loads
- In accordance with the directives DIN EN 10204

### Length
- Factory calibration
- Replacement of the measuring device if required
- Calibration of special-purpose gauges in accordance with customer drawings
- Calibratable measuring devices:
  - Caliper gauges to 800 mm
  - Testing pins to 100 mm
  - Ring gauges and plug gauges to 150 mm
  - Tapered thread gauges to 150 mm
  - Gauge blocks to 170 mm
  - others on request

### On site (pressure and temperature)
- In order to have the least possible impact on the production process, we offer you a time-saving, on-site DAkkS calibration throughout Germany.
- In our calibration van or on your workbench
- With a DAkkS accreditation for pressure:
  - from -1 bar ... +8,000 bar
  - with accuracies between 0.025 % and 0.1 % of full scale for the standard used
- With a DAkkS accreditation for temperature from -55 °C ... +1,100 °C
Service for diaphragm seal systems

Diaphragm seal systems are used for demanding measuring requirements with extreme medium temperatures of -90 °C up to +400 °C in the process industry. The diaphragm seal assemblies protect the process transmitter from aggressive, corrosive, heterogeneous, abrasive, highly viscous or toxic media.

Options
- Replacement service for diaphragm seal systems with process transmitters
- Replacement service for diaphragm seal systems with mechanical measuring instruments
- Repair of the defective parts
- Reconfiguration of the existing diaphragm seal system

Advantages
- Cost and time saving
- Functional test of a process transmitter
- Current material certificate
- New calibration of the entire system
In our segment brochures, you will find the entire product families for the areas of “ventilation and air-conditioning”, “sanitary applications”, “SF₆ lifecycle solutions” and “high purity & ultra high purity” and also their technical distinctions.

**Ventilation and air-conditioning**

**Sanitary applications**

**SF₆ solutions**

**High purity & ultra high purity**
